

INFORMATION SHEET MAMMOGRAPHY

Information on the mammography

Purpose of the examination

Your physician will refer you for a mammography to clarify palpable lump formations, breast pain, secretion from the nipple, abscesses or other changes.

Furthermore, you can come for mammography as part of the Austrian early detection program.

Here, women aged 45 - 69 automatically receive an invitation every 2 years. Women aged 40 - 44 or 70 and older must request a one-time invitation for a screening exam ([hotline: 0800 500 181](tel:0800500181) or via www.frueh-erkennen.at or an email to serviceline@frueh-erkennen.at).

Information on the examination

Please make an appointment for this examination and bring the following with you to the examination:

- **E-card and photo ID**
- **Original assignment (it must still be valid)**
- **If your last mammography was not carried out in our practice, we ask you to bring the existing mammography images and findings along to the examination!**

We do not perform X-ray examinations on pregnant patients in our practice!

Preparing for the examination

In order to achieve an optimal examination result, please come in the period of the first 10 days of the menstrual cycle (first day of menstruation until the 10th day of the cycle), if possible. If you no longer have a cycle, you can come in for an exam at any time.
